

# The Interventionalist Journal

Scientific Journal of Medical Intervention

## Ethics Statement

**The Interventionalist** is highly committed in upholding ethics in publication and quality of articles. We strive to follow the Code of Conduct as defined by the Committee of Publication Ethics (COPE). These publication ethics include the editor following certain rules on relations with readers, authors, and reviewers as well as procedures for handling complaints. Conformance to standards of ethical behaviour is therefore expected of all parties involved: Authors, Editors, Reviewers, and the Publisher.

In particular,

**Authors:** Authors should present an objective discussion of the significance of research work as well as sufficient detail and references to permit others to replicate the experiments. Fraudulent or knowingly inaccurate statements constitute unethical behaviour and are unacceptable. The authors should ensure that their work is entirely original works, and if the work and/or words of others have been used, this has been appropriately acknowledged. The corresponding author should ensure that there is a full consensus of all co-authors in approving the final version of the paper and its submission for publication.

**Editors:** Editors should evaluate manuscripts exclusively on the basis of their academic merit. They also have a duty to act if any misconduct is suspected and to ensure the integrity of the academic record. The editors must not use unpublished information in the editor's own research without the express written consent of the author.

**Reviewers:** Any manuscripts received for review must be treated as confidential documents. Privileged information or ideas obtained through peer review must be kept confidential and not used for personal advantage. Reviews should be conducted objectively, and observations should be formulated clearly with supporting arguments. Any selected referee who feels unqualified to review the research reported in a manuscript or knows that its prompt review will be impossible should notify the editor and excuse himself from the review process. Reviewers should not consider manuscripts in which they have conflicts of interest.

- In case of registration for our system, personal data will be processed in the scope of such services.
- Your personal data will be used for statistical analysis that helps us to improve our services.
- Some of your personal data may be processed in the course of implementing a peer review procedure.
- We have implemented appropriate safeguards to secure your personal data and retain your personal data only as long as necessary.

Our Submission and peer review system may contain links to third party websites, including journal affiliates and scholarly societies. We are not responsible for the content and the data collection on respective third-party websites; please check the privacy policy of respective websites for information of respective websites' data processing activities.
